Cameron Branch

Walker, LA (Relocating to Charlotte, NC) CB9611HQ@gmail.com 225-773-3779 in/cb9611

SUMMARY

Actively relocating to Charlotte, NC. Versatile IT Professional and Developer with 4+ years of experience in enterprise systems support and front-end engineering. Proven expertise in maintaining high-availability infrastructure (Active Directory, VMware, Citrix) while leveraging advanced development skills to solve complex problems—most notably designing a React-based simulation platform that secured **$8,000,000 in federal funding**. Seeking to apply this unique blend of systems administration and software development to a Junior System Administrator or Technical Analyst role within the Charlotte market.

EXPERIENCE

IT Service Desk Technician Tier 1

Sparkhound LLC **February 2021 – Present, Baton Rouge, LA**

- **Enterprise Infrastructure Support:** Deliver Tier 1 technical support within a high-volume Managed Services Provider (MSP) environment, resolving complex OS, application, and connectivity issues for diverse enterprise clients.
- **Identity & Access Management (IAM):** Administer user accounts, group memberships, and security permissions through **Active Directory**, ensuring secure and timely access to critical business resources.
- **Virtualization & Remote Access:** Troubleshoot and manage virtualized desktop environments using **VMware** and **Citrix**, maintaining high availability for remote and hybrid workforces.
- **Incident Lifecycle Management:** Manage the end-to-end lifecycle of technical incidents via **ServiceNow** and **Fresh Service**, maintaining strict adherence to **SLA (Service Level Agreement)** targets.
- **Root Cause Analysis (RCA):** Conduct deep-dive diagnostics using **ConnectWise** and remote monitoring tools to identify systemic issues, transitioning from "surface-level fixes" to permanent infrastructure resolutions.
- **Cross-Functional Collaboration:** Partner with Tier 2 and Tier 3 engineering teams to facilitate complex escalations, providing detailed technical documentation and "pre-flight" diagnostics to expedite resolution.

CAPSTONE PROJECT

Integrated Modeling and Simulation System (IMASS)

Southeastern Louisiana University • August 2025 - December 2025

- **Designed and built a React-based front-end application** that served as the primary user interface for a complex scientific modeling and simulation platform, enabling users to configure, execute, and monitor simulation workflows through a browser-based UI.
- **Implemented a custom node-based Scene Builder interface** that allowed users to visually construct workflow pipelines by connecting inputs, simulation models, and outputs, significantly improving usability and reducing the learning curve for non-technical users.
- **Developed reusable, modular React components** to support dynamic configuration panels, validation logic, file uploads, and execution controls, ensuring maintainability, scalability, and consistent user experience across the application.
- **Integrated the front-end with RESTful APIs** to manage scenarios, simulation jobs, execution metadata, and result retrieval, enabling real-time data-driven UI updates and seamless interaction between the user interface and backend services.
- **Implemented real-time UI updates** to reflect execution status, system health, and job progress, providing users immediate feedback during long-running simulations and improving transparency and user confidence.
- **Front-end design, usability, and system demonstration directly contributed to securing $8,000,000 in funding from the United States Congress** for the university, supporting continued research, development, and expansion of the platform.

EDUCATION

Bachelor of Science in Information Technology

Southeastern Louisiana University • Hammond, LA • 2025

Associate of General Studies

Northshore Technical Community College • Hammond, LA • 2019

SKILLS

Systems & Infrastructure: Active Directory, VMware, Citrix, Identity & Access Management (IAM), SLA Management, Enterprise Technical Support.

IT Service Management (ITSM): ServiceNow, Fresh Service, ConnectWise, Incident Lifecycle Management, Technical Documentation.

Development & Frameworks: React.js, JavaScript (ES6+), HTML5, CSS3, Component-Based Architecture, Responsive Web Design.
